All data is subject to alterations in technical specification.
ABUS overhead travelling cranes. The solution for difficult tasks.

ABUS overhead travelling cranes can lift, handle and lower loads of up to 120 tonnes. Five main types are available: these include single-girder travelling cranes, double-girder travelling cranes for heavy-duty work and wide spans and underslung travelling cranes for buildings with special conditions. The fourth main type is the wall travelling crane whilst the fifth is the single girder semi-goliath crane, installed on a separate crane track beneath the other types in order to optimise material handling.

- **Load capacity:** up to 120 t max.
- **Span:** up to 40 m (depending on load capacity)
- **Applications:** mainly for area-coverage material handling within buildings
- **Characteristics:** comprehensive standard and optional equipment to suit individual applications

ABUS ZLK double-girder travelling crane
ABUS single-girder overhead travelling cranes

- easy to install accessories
- high crane and trolley travel speeds possible
- wide range of connection variants for optimum adaptation to local conditions
- very high hook positions possible

Load capacity: up to 16 t
Span: up to 39 m
(depending on load capacity)

ELV: Single-girder overhead travelling crane with rolled section girder

ELK: Single-girder overhead travelling crane with welded box girder

ELS: Single-girder torsion box crane with side-mounted trolley

ABUS underslung overhead travelling cranes

- crane track mounted on ceiling
- short side approach dimensions, allowing optimum utilization of building width
- ideal for use as a workplace crane serving several work stations

Load capacity: up to 8 t
Span: up to 25 m
(depending on load capacity)

DLM: Underslung overhead travelling crane for lighter loads

EDL: Underslung overhead travelling crane for heavier loads

ABUS double-girder overhead travelling cranes

- wide range of connection variants for optimum adaptation to local conditions
- very high hook positions possible

Load capacity: up to 120 t
Span: up to 40 m
(depending on load capacity)

ZLK: Double-girder overhead travelling crane with welded box girder

ABUS single-girder semi-goliath crane (box girder) EHPK

- installed on its own track beneath other types of travelling crane

Load capacity: up to 10 t
Track length: up to 15 m
(depending on load capacity)

ABUS EWL wall travelling crane

- short side approach dimensions, allowing optimum utilization of building width
- installed on its own track beneath other types of travelling crane

Load capacity: up to 5 t
Track length: up to 12 m

ABUS single-girder overhead travelling cranes

- wide range of connection variants for optimum adaptation to local conditions
- very high hook positions possible

Load capacity: up to 5 t
Track length: up to 12 m

Load capacity: up to 10 t
Track length: up to 15 m
(depending on load capacity)

ABUS single-girder semi-goliath crane (box girder) EHPK
ABUS HB light crane system.
You can always extend a really smart system.

ABUS HB is a modular system which allows you to build up a complete tailor-made material handling solution to suit your requirements. The system can be adapted to the conditions and dimensions of almost any application and reliably mounted on a wide variety of different ceilings. The main advantage of an ABUS HB system is that it can easily be extended and adapted at any time, allowing it to grow with your business.
**for linear point-to-point coverage**

**ABUS monorail**
- low headroom
- wide suspension spacing
- optional electric cross travel

**Load capacity:** up to 2 t

**ABUS EHB single-girder crane**
- very light crane; ideal for use in lightweight buildings
- easy to move manually
- low headroom
- short end approach dimensions
- wide suspension spacing

**Load capacity:** up to 1.25 t
**Crane girder length:** up to 10 m (depending on load capacity)

**ABUS EHB-X stooled up single-girder crane**
- stooled up crane for optimum use of available space
- easy to move manually
- ultra low headroom
- short end approach dimensions
- wide suspension spacing
- optional electric long + cross travel
- optional mobile control

**Load capacity:** up to 1 t
**Crane girder length:** up to 10 m (depending on load capacity)

**ABUS double-rail**
- wide suspension spacing
- chain hoist installed between rails for improved lift height
- optional electric cross travel
- optional mobile control

**Load capacity:** up to 2 t
**Crane girder length:** up to 12 m (depending on load capacity)

**ABUS ZHB double-girder crane**
- chain hoist installed between crane girders for improved lift height
- very low headroom
- optional electric long + cross travel
- optional mobile control

**Load capacity:** up to 2 t
**Crane girder length:** up to 12 m (depending on load capacity)

**ABUS ZHB-X stooled up double-girder crane**
- stooled up crane for optimum use of available space
- ultra low headroom
- wide maximum suspension spacing
- optional electric long + cross travel
- optional mobile control

**Load capacity:** up to 2 t
**Crane girder length:** up to 12 m (depending on load capacity)

**for area coverage**

**ABUS single girder rolling beam crane system EHB-I**
- Very low self weight, ideal for lightweight construction buildings
- easy to move manually
- standard ‘I’ beams utilised as downshop crane tracks
- favourable approach dimensions

**Load capacity:** up to 2 t

**ABUS double girder rolling beam crane system ZHB-I**
- High load capacity
- Particularly favourable hook heights due to the arrangement of the chain hoist stooled up between the crane beams
- standard ‘I’ beams utilised as downshop crane tracks
- Electrically powered motions (Option)
- Mobile pendant controller (Option)

**Load capacity:** up to 2 t
**Crane girder length:** up to 12 m (depending on load capacity)

**ABUS ZHB-3 double-girder crane**
- long crane spans possible
- lower headroom compared with EOT
- wide suspension spacing
- electric long + cross travel
- optional mobile control

**Load capacity:** up to 1.6 t
**Crane girder length:** up to 22 m (depending on load capacity)

**ABUS single girder rolling beam crane system EHB-I**
- Very low self weight, ideal for lightweight construction buildings
- easy to move manually
- standard ‘I’ beams utilised as downshop crane tracks
- favourable approach dimensions

**Load capacity:** up to 2 t

**ABUS ZHB-3 double-girder crane**
- long crane spans possible
- lower headroom compared with EOT
- wide suspension spacing
- electric long + cross travel
- optional mobile control

**Load capacity:** up to 1.6 t
**Crane girder length:** up to 22 m (depending on load capacity)

**for area coverage**

**ABUS EHB single-girder crane**
- very light crane; ideal for use in lightweight buildings
- easy to move manually
- low headroom
- short end approach dimensions
- wide suspension spacing

**Load capacity:** up to 1.25 t
**Crane girder length:** up to 10 m (depending on load capacity)

**ABUS EHB-X stooled up single-girder crane**
- stooled up crane for optimum use of available space
- easy to move manually
- ultra low headroom
- short end approach dimensions
- wide suspension spacing
- optional electric long + cross travel
- optional mobile control

**Load capacity:** up to 1 t
**Crane girder length:** up to 10 m (depending on load capacity)

**ABUS ZHB-3 double-girder crane**
- long crane spans possible
- lower headroom compared with EOT
- wide suspension spacing
- electric long + cross travel
- optional mobile control

**Load capacity:** up to 1.6 t
**Crane girder length:** up to 22 m (depending on load capacity)

**ABUS double girder rolling beam crane system ZHB-I**
- High load capacity
- Particularly favourable hook heights due to the arrangement of the chain hoist stooled up between the crane beams
- standard ‘I’ beams utilised as downshop crane tracks
- Electrically powered motions (Option)
- Mobile pendant controller (Option)

**Load capacity:** up to 2 t
**Crane girder length:** up to 12 m (depending on load capacity)
ABUS jib cranes.
A sound basis for efficient material handling.

ABUS jib cranes are extremely versatile units which can easily be adapted to the customer’s specific requirements. For example, jib cranes can be mounted on floors, walls or existing supports. Electric wire rope or chain hoists are available as options, as are electric cross travel and electric slewing gear.

- **Load capacity:** up to 6.3 t max.
- **Jib length:** up to approx. 10 m (depending on load capacity)
- **Applications:** swept area coverage
- **Characteristics:** can be installed in any position, slewing range up to 360°, depending on model
ABUS jib cranes

ABUS LS pillar jib crane
- light self weight; can be installed even if floor or foundation conditions are difficult
- almost effortless push trolley travel

ABUS LSX pillar jib crane
- smooth-running jib for easy manual operation
- optimal highest hook position
- optional electric cross travel

ABUS LW wall jib crane
- relatively light weight; can also be installed in lightweight buildings
- trolley very easy to move by hand

ABUS LWX wall jib crane
- smooth-running jib for easy manual operation
- optimal highest hook position
- optional electric cross travel

ABUS VS pillar jib crane with electric chain hoist
- low headroom offers optimal highest hook position
- optional electric slewing gear
- optional electric cross travel
- optional mobile control

ABUS VS pillar jib crane with electric wire rope hoist
- low headroom offers optimal highest hook position
- electric slewing gear
- electric cross travel
- mobile control

ABUS VW wall jib crane with electric wire rope hoist
- low headroom offers optimal highest hook position
- electric slewing gear
- electric cross travel
- mobile control

The illustration shows a crane with electric slewing gear, electric trolley travel and mobile control.

Load capacity: up to 1 t
Jib length: up to 7 m (depending on load capacity)

Load capacity: up to 0.5 t
Jib length: up to 7 m (depending on load capacity)

Load capacity: up to 4 t
Jib length: up to 10 m (depending on load capacity)

Load capacity: up to 6.3 t
Jib length: up to 10 m (depending on load capacity)
ABUS electric wire rope hoists. For sensitive handling of heavy loads.

ABUS electric wire rope hoists are the central components of crane systems for handling heavy loads. They feature motors, brakes, transmissions and electrical and electronic systems that have all been tried and tested over many years of arduous service. Standard precision travel and lifting speeds allow the power and speed available to be gauged precisely. ABUS electric wire rope hoists are also extremely user friendly, featuring compact design, very easy maintenance and easy plug-in connectors.

- **Load capacity:** up to 120 t max.
- **Characteristics:** favourable dimensions, comprehensive standard and optional equipment.

**ABUS type E electric wire rope hoists**

This ABUS type DB electric wire rope hoist has a walkable service platform for even easier maintenance.

The ABUS type E electric wire rope hoist: a compact solution for single-girder travelling cranes.

This installation benefits from the ultra low headroom design of the ABUS type DQA wire rope hoist.
**ABUS electric wire rope hoists for single-girder travelling cranes**

- **Load capacity:** up to 51 t
  - Modular wire rope hoist
    - Modular design
    - Freely selectable travel and hoist profiles (stepless, two-speed or proportional). Alternatively pole-change hoist motors
    - Anti-sway control for the movement of goods in sensitive areas

- **Load capacity:** up to 16 t
  - Type E · monorail trolley
    - Compact design
    - Two direct-driven trolleys without open gears
    - Trolley can be adapted to different flange widths
    - Also for use with monorail systems made from standard rolled section beams

- **Load capacity:** up to 10 t
  - Type S · Side-mounted trolley
    - Reeling beside crane bridge for optimum maximum hook height

- **Load capacity:** up to 25 t
  - Type U · Bottom flange trolley
    - Can be used on a monorail track with normal rolled section girders
    - Direct-driven trolleys with four direct drives
    - 8 wheel end carriages for reduced wheel loads

**ABUS electric wire rope hoists for double-girder travelling cranes**

- **Load capacity:** up to 63 t
  - Type D · Standard Crab Unit
    - Articulated end carriage connection for firm four-wheel contact
    - Two direct drives for trolley without open gears

- **Load capacity:** up to 40 t
  - Type DA · Low headroom crab unit
    - Stooled down for minimal headroom dimensions.
    - For use where very little space is available above the crane.
    - Articulated end carriage connection for firm four-wheel contact
    - Two direct drives for trolley without open gears

- **Load capacity:** up to 40 t
  - Type DQA · Stooled down crab unit turned through 90°
    - Stooled down for minimal headroom dimensions.
    - Articulated end carriage connection for firm four-wheel contact
    - Two direct drives for trolley without open gears
    - Cable drum axle in cross travel direction

- **Load capacity:** up to 120 t
  - Type Z · Twin Drive Crab Unit
    - With twin hoist
    - Articulated end carriage connection for firm four-wheel contact
    - Two direct drives for trolley without open gears

- **Load capacity:** up to 80 t
  - Type ZA · Low headroom crab unit
    - Stooled down for minimal headroom dimensions.
    - For use where very little space is available above the crane.
    - Articulated end carriage connection for firm four-wheel contact
    - Two direct drives for trolley without open gears
ABUS electric chain hoists.
Reliable links in the material handling chain.

Load capacity: up to 200 kg
Lifting speed: up to 20 m/min

Load capacity: up to 630 kg
Lifting speed: up to 20 m/min

Load capacity: up to 1250 kg
Lifting speed: up to 20 m/min

Load capacity: up to 4000 kg
Lifting speed: up to 20 m/min

In stationary installations, with push trolleys or electric trolleys, ABUS electric chain hoists have a number of extremely useful, user-oriented advantages. These include a very low headroom design for optimum utilisation of available space, a standard precision lifting speed for sensitive lifting and lowering operations and brake linings with a long service life. Under normal conditions, the unit can complete 1 million full-load braking operations before adjustment is required.
With the ABUS lightweight mobile gantry, you can mobilize the lifting power of an ABUS electric chain hoist. The crane is designed for loads up to two tonnes and features four steerable stop rollers for easy handling. Lifting power is always available where you need it. Depending on the load capacity required, the maximum overall width is up to 7.9 m and the maximum overall height up to 5 m. If necessary, the ABUS lightweight mobile gantry is also easy to dismantle.

**Load capacity:** up to 2 t max.

**Applications:** mobile

**Characteristics:** easy to move and dismantle, with four steerable stop rollers (two with 90° direction locks)

ABUS monorail trolley tracks are the ideal solution for those applications where a linear material flow is needed. Application-specific options for fixing the system onto existing ceiling constructions or portal supports fixed on the floor allow optimised solutions for the transport of loads. ABUS electric chain hoists with a push-pull or a powered trolley are used for load capacities up to 4 t. ABUS electric wire rope hoists type E are used for larger load capacities. Thanks to an extensive range of standard and optional equipment, such as the ABUS radio remote control system, loads can be moved in an easier and more flexible manner.

**Load capacity:** up to 16 t max.

**Field of application:** linear point-to-point transport

**Characteristics:** allows flexible and individual planning, many options for fixing, extensive standard and optional equipment
Anything else you need? The ABUS accessories range.

With the accessories in the ABUS range, you can tailor an ABUS crane to meet your specific requirements. The equipment available, ranging from energy chains and radio remote controls to lighting and load measurement systems, should be sufficient to meet all your needs.

ABUS crane lighting systems effectively illuminate the working space under a crane, avoiding the shadows normally cast by crane girders working beneath normal factory lighting. ABUS use highly efficient energy-saving LED lights. The number of lights, as well as the light intensity are dependent on customer requirements.

AZS smooth starting units and SU-2 smooth switching relays are the ideal accessories for the smooth handling of sensitive loads and goods using pole-change drive systems. These electronic systems operate to control long and cross travel sensitively with adjustable switching characteristics and improved deceleration characteristics. Depending on individual requirements, the system can also be used separately for long or cross travel.

Radio remote control give crane operators greater freedom of movement, allowing them to choose the position which gives the best view of their working area and effectively saving time. ABUS offers radio remote controls with joystick or compact push-button hand held transmitter. ABUS radio remote controls are also suitable for multitask operation, with parallel access to several cranes.

The ABUS tandem control system allows the crane operator to control two electrically coupled travelling cranes at the same time. Ideally, the ABUS radio remote control system should be used in combination with the tandem control system. With this control configuration, two crane operators can control the two cranes separately, or one operator can control both cranes, either separately or together.

LED matrix display

Load measurement systems
LIS-SE: Load measurement and evaluation system that measures the voltage and current on all three phases of the hoist motor. Optional functions: load population recorder.
LIS-SV: this load indicator system offers all the functions of the LIS-SE system, but uses load measurement sensors in addition to motor current measurements. This system is an attractive proposition for systems with several hoists where the overall total load of all hoists needs to be limited. Measurement accuracy increases systematically, with the resultant load able to be shown on the pendant handset display or LED matrix display.

Anti-collision device
The ABUS anti-collision device protects cranes, preventing accidental collision via photoelectric distance measurement. Automatic switch-over to a lower speed as the two hoists approach each other is a standard feature. A shut-down function can be incorporated. ABUS can also supply collision prevention devices designed to maintain a specified minimum spacing and other special designs.

Important: Not suitable to be used for distancing required because of structural reasons. In such cases the light barrier system may be composed of fail-safe components and check and malfunction indicators.

AZS cross-type limit switches
AZS smooth starting units and SU-2 smooth switching relays are the ideal accessories for the smooth handling of sensitive loads and goods using pole-change drive systems. These electronic systems operate to control long and cross travel sensitively with adjustable switching characteristics and improved deceleration characteristics. Depending on individual requirements, the system can also be used separately for long or cross travel.

Radio remote control give crane operators greater freedom of movement, allowing them to choose the position which gives the best view of their working area and effectively saving time. ABUS offers radio remote controls with joystick or compact push-button hand held transmitter. ABUS radio remote controls are also suitable for multitask operation, with parallel access to several cranes.

The ABUS tandem control system allows the crane operator to control two electrically coupled travelling cranes at the same time. Ideally, the ABUS radio remote control system should be used in combination with the tandem control system. With this control configuration, two crane operators can control the two cranes separately, or one operator can control both cranes, either separately or together.

ABUControl: lifts cranes to a new level

Travel profiles can be used to adapt ABUS cranes to your circumstances. Cranes with two fixed speeds move in a completely different way to cranes controlled by frequency converter, for example. Travel and hoist profiles allow cranes to be adapted to your current or required situation. This means your crane operators no longer have to adjust existing cranes and perceive the increased productivity of an additional crane system.

Operating data, settings, service information. By means of the modern KranOS interface, you can keep tabs on the crane. For wireless use with any laptop or tablet with browser. Speeding up regular annual inspections into the bargain.

ABUControl relies on tried-and-trusted freely available components from renowned electronics manufacturers. Replacement or repair requires neither ‘specialist knowledge’ nor ‘software licences’. You remain in complete control of the crane at all times and have a free choice of service partner. ABUControl - a unique promise for simple maintenance and repairs.

The ABUS sway control increases safety and convenience during transportation of goods in sensitive areas. Sway control is based on mathematical calculations. Travel speeds, acceleration and deceleration of crane and hoist, the hook position and length of the load lifting attachment are taken into account. Even people who rarely operate cranes can transport loads safely with the aid of the sway control feature.

The ABUS synchronisation control of two hoists on one crane enables the safe handling of long products. Divergence of lifting speeds is prevented effectively through constant regulation even where different wire rope hoists are used. This requires the crane to be equipped with a frequency converter for lifting. Travel speeds are regulated even on cranes which run in tandem. Two cranes, maximum of four hoists and their hoisting motions, all regulated.
Good design is a matter of detail. Good service too.

Comprehensive advice, consistently applied, lays a solid foundation for the design of any crane system. Our computer-aided design team uses a continuous database for all stages from initial stocktaking through to planning and design. The result is a proposal with full technical documentation precisely in accordance with your requirements. Our proposals form a reliable basis for your decision to purchase a modern, high-performance indoor crane system.

Precise and reliable right down to the last detail. Computer-aided design systems give a clear overview at all stages in the project.

ABUS Service is a standard feature of ABUS quality.

The ABUS all-inclusive service package offers greater safety and helps save costs. Apart from regular servicing, the package includes a number of other services which would normally result in additional cost. In addition, early diagnosis and regular maintenance by trained ABUS service staff systematically improve the availability of your crane system. ABUS service packages are also available for cranes and hoists produced by other companies.

- ABUS representatives in more than 50 countries
- Express spare parts delivery
KranHaus: Fascinating insights into the world of cranes

Transport loads single-handedly with a powerful overhead travelling crane, experience the ease of our crane systems yourself, ride on a 8-metre-high crane – the KranHaus at our company headquarters in Gummersbach offers an overview of current crane technology as well as an exciting insight into real-life working situations in a building that has 1,600 m² of space. In the crane workshop above the crane building, service technicians, installation engineers, service engineers and crane operators are trained. Seminars on the themes of crane maintenance, repair and servicing take place in the modern training rooms that are equipped with special technology. You are also warmly welcome to get to know the KranHaus yourself, and to optimise your particular material handling application requirements with us.
