ECONOMIC EFFICIENCY

Improvement, standardisation and transparency of processes and products

Standardized reports ensure that relevant information is consistently communicated to company management. These reports provide a clear overview of energy consumption across different machines and operational areas, promoting transparency and comparability.

Relevant metrics and controllable key figures

The energy consumption of all production-related machines is recorded. Based on this data, we develop relevant key figures that enable deviations to be identified at an early stage and targeted countermeasures to be taken.

SECURITY

Consistent and reliable use of standards and software

We use a cloud-based software solution to visualise and analyse energy data, ensuring high availability and minimal downtime.

Compliance with relevant laws

To ensure compliance with all relevant energy regulations, we maintain a comprehensive legal register systematically covering all applicable requirements.

AT A GLANCE

Ambitious and understandable goals

Recording of energy consumption for all production-related machines

Systematic and complete compliance with energy law requirements

EMPLOYEE MOTIVATION

Ambitious and understandable goals

We aim to continuously reduce energy consumption by setting ambitious, easily understandable goals that are regularly reviewed and updated in line with current developments. This ongoing improvement process is a core element of our energy management system and makes a significant contribution to enhancing energy efficiency.

Continuous development and qualification

Achieving our energy targets requires that all employees with a significant impact on energy consumption possess the necessary expertise. We therefore actively promote the training and professional development of these employees. Through regular courses and further education measures, we ensure that the know-how needed to enhance energy efficiency is consistently available, enabling the long-term achievement of our objectives.

Please feel free to submit ideas and questions via the hotline or, even better, as suggestions for improvement.

AT A GLANCE

Continuous reduction of energy consumption as a central goal

Regular review and adaptation to current developments

Regular training courses to sustainably increase energy efficiency
